Least ask! The refund is limited to free of charge. Use the reset code you get when you download the reset program and then to reset your printer. Epson software 83 adjustment program References Category:Digital photography Category:Software stubsQ: Grails: Run all tests in all plugins/projects I'm working on a Grails 2.3.7 application and I would like to run my tests against all plugins that have tests. I found that I can execute the following command in my testing scripts: `grails test-app -Dtest=unit` This executes all tests in my main application, but I am not able to find a way to execute tests from all plugins. I know I can run test suites from plugins like this: `grails test-app -Dtest=suite` But how can I find all tests in all plugins and run them? A: In addition to the other answer here, this solution is more concise: `grails test-app -Dtest=unit -Dtests="*TestCase" -Dtests=testsuite` is a shortcut for `-Dtest=suite`. You can also execute tests for particular plugin (say, 'my-plugin') from the command line: `grails test-app -Dtest=unit -Dtests="my-plugin.Domain"` A: You can use this command in your grails script: `grails test-app -Dtest=suite -Dtests="*TestCase"` Where the testsuite is the name of the folder where the test suites are located (and may include the plugin name). The `-Dtests="*TestCase"` is a shortcut for the test suites name so you can also type: `-Dtests=grails.app.name.myApp.Domain.UnitTests` A: As of the new Grails 2.4 it is possible to execute all tests in all plugins: `grails test-app -Dtest=all`  
Reference: Q: Vue.js VUEX - How to create a custom component using Vue.js VUEX I have a small challenge. I'm starting with Vue.js and VUEX,
