AutoCAD features: Design2D The design, drafting, and presentation capabilities of AutoCAD are used primarily for mechanical and architectural design projects. The design tools are designed to be used as a rapid prototyping tool. Its primary functions are to draw (design) the actual objects to be designed, create a drawing of the required presentation, plot plans, analyze objects, share drawings, and send drawings to a printer. Layouts The Layouts tool allows the user to create and maintain a collection of reference drawings, or “layouts”, of commonly used 2D patterns or geometry. A Layout can be combined with a specific component or with an entire drawing, and used as a template for constructing subsequent drawings. As with styles, a Layout can also be modified using the Edit -> Format panel. The Edit menu has two sub-menus: View -> Layouts View -> Layouts Preferences The layouts are listed and stored in two different areas: Layout Gallery Main Toolbar Layout Gallery All the Layouts can be found in the Layout Gallery, which is located in the View menu. The layouts can be selected by clicking on the layout name. Once a Layout is selected, its preferences can be modified by clicking on the layout name and selecting Edit -> Layout, which will open the Layout as a dialog window. The settings can be modified at the following menu item: View -> Layouts Main Toolbar When a Layout is selected, the settings for the Layout can be found in the Main Toolbar of the AutoCAD application. For more details see the complete list of menus and toolbars. Templates The Templates menu provides access to the application's templates, which are the starting point for creating new drawings. Templates allow a drawing to be constructed and tailored to a specific purpose. Templates can be selected from the templates library, located in the View menu: View -> Templates Windows The Windows panel offers a number of tools to create and organize drawings in a hierarchical drawing structure. Project windows: Window Manager Views Windows Diagrams Views The View menu has two sub-menus: View -> Diagrams View -> Views The diagram

To make AutoCAD's API easier to use, the AutoCAD team has developed an API Reference (e.g. for Visual LISP). AutoCAD supports multiple languages for input and output. English is the default language for use on the command line. Although AutoLISP is the primary language for use in object-oriented AutoCAD plugins, it is still supported for use with the AutoCAD Express series of products. AutoCAD ObjectARX ObjectARX is a C++ class library that enables the development of AutoCAD-based plug-ins. ObjectARX is designed to be consistent and easily integrated with other Autodesk products such as 3D Studio Max, AutoCAD LT, AutoCAD Architecture and AutoCAD Plant. Features ObjectARX consists of the following major components: ObjectARX manages the auto-scripting environment, provides class, data and function definitions, and performs object and function searches. It also contains a toolbox of objects and functions that can be used in both the functions and class definitions. Objects and functions are defined by using the class definition syntax and the ObjectARX programming environment. The ObjectARX environment automatically analyzes object and function definitions and generates the corresponding classes and files. ObjectARX supports the following AutoCAD-related object types: Activex Controls AutoLISP objects ActiveX Automation Controls Database objects Hyperlinks Image objects Lines Obsolete components of the Structural Editing and Annotation toolbar Objects created with the AutoLISP function auto_load Objects created with the AutoLISP function auto_free Objects created with the AutoLISP function auto_add Objects created with the AutoLISP function auto_load References Further reading Jesse Liberty, Building a Plugin in AutoLisp and AutoARX External links ObjectARX API Documentation Software Architecture Guide, ObjectARX and AutoCAD for AutoCAD Express Series ObjectARX AutoLISP Category:AutoLISP programming language family Category:AutoCAD ![Intratumoral injection of K5-IL17 leads to augmented tumors\ (**A**) Subcutaneous tumors were induced by intratumoral injection of PBS (black), K5-vector (red 5b5f913d15

R. Drew Lewis R. Drew Lewis (May 3, 1913 – April 22, 2001) was an American lawyer who was best known for his role in the U.S. Supreme Court's landmark decision in *Bouie v. City of Columbia* in 1948. Born in Norristown, Pennsylvania, Lewis received his bachelor's degree in 1935 from Dartmouth College and his law degree from Columbia Law School. After practicing law in Denver, Colorado, he served in the United States Army from 1943 to 1945. Lewis went into private practice after leaving the Army, where he became an assistant to then-Solicitor General Philip B. Perlman. Lewis then became a law clerk for the Supreme Court in 1951. There, he worked on the *Brown v. Board of Education* and *Gideon v. Wainwright* decisions. When the Supreme Court decided in *Bouie v. City of Columbia* to invalidate a conviction for a crime that had not been prosecuted in accordance with South Carolina law, Lewis was one of two attorneys working on the case. He drafted the majority opinion for the Court, which found that *Bouie* had been convicted under an old law that had been recently changed by the state, and thus a retroactive application would violate *Bouie's* due process rights. After Lewis retired from the Supreme Court in 1980, he returned to private practice. He died of heart problems at a hospital in Denver in 2001.
