Comparison between the trials of prostatectomy and irradiation. For patients with clinically localized prostate cancer, treatment options are open. For early stages (cT1,2) both radical prostatectomy and radiotherapy may result in similar rates of survival and disease-free survival. For patients with locally advanced or metastasized prostate cancer, however, radical prostatectomy provides better control of tumor volume. To compare the results of radical prostatectomy with those of radiation therapy. To compare the results of high-dose brachytherapy and irradiation therapy for patients with prostate cancer. We searched the Cochrane Prostate Cancer Group trials register, the Cochrane Controlled Trials Register, Medline (1992-96), Embase (1995-96), and other relevant articles. We handsearched relevant journals and checked the reference lists of all identified studies. All randomized controlled trials comparing the results of surgery and radiation therapy for prostate cancer in patients with no more than cT3 disease. Two reviewers assessed studies for eligibility and methodological quality. Data were extracted independently by two reviewers. For the eight included studies, we did not find any report of randomized controlled trials comparing radical prostatectomy and 3da54e8ca3
