Electrum For PC

Keymacro is the most powerful and easiest to use macro recorder and editor in the business. With Keymacro, you can record and edit any combination of keyboard strokes, mouse clicks and other actions without leaving the software interface. No other software offers what Keymacro does. No other software is so easy to use. With Keymacro, you have complete control over what you record, including selecting and editing macros, recording multiple macros in sequence, and saving macros to a single macro file. You can create one-time use macros, or you can save a series of macros that you can play back anytime you want. You can use macros to repeat any sequence of keyboard strokes and mouse clicks, or you can save macros that contain any complex series of actions. And you can record macros from any other application. Use Keymacro to create and edit powerful batch files. Keymacro can record and edit a complete batch file - the whole file or any sub-sections - so that you can save yourself repetitive typing and boring mouse clicking. Using Keymacro, you can capture any selection or action performed within a program, or you can capture any section of the screen. You can record and edit even complicated batch files using the program's sophisticated macro editor. Keymacro supports any key combination. The program can record and edit any combination of keyboard strokes, mouse clicks, menus, Windows menus, Dialog boxes, Tool Tips, and other actions. You can even record application-specific macros, such as editing a financial spreadsheet or customizing a piece of software. Keymacro supports any program and any language. Record and edit macros from any program you want. You can record from any program that supports scripting. Record from any language you want. And if you don't want to write the text yourself, you can type in other languages, including HTML, VBScript, and JScript, and have them interpreted by the program. Record and edit the action performed by any mouse click. You can record and edit any single mouse click, any double or triple click, and any mouse action that has a default. You can record and edit the default action used by any mouse click. You can even record and edit the mouse actions that are performed by mouse clicks on a menu or tool bar. Keymacro records and edits any action in the system. It supports virtually any action. You can record any action the system performs - such as opening a file, running a program, displaying a dialog box, and

Electrum [Win/Mac]

Calculate, validate, send, and receive payments with Bitcoin. Imagine a world without banks. Every day, paychecks, purchases, and other monetary transactions are handled by banks. However, these institutions can be unreliable and charge fees for each operation. Because of this, an increasing number of individuals are turning to peer-to-peer money transfer services, where the monetary transactions are sent directly from one party to another without a financial intermediary. This free, open-source software allows you to perform all of these functions in a fast, secure, and decentralized manner. It's even possible to split payments between multiple receivers or senders, which is essential if the sender or receiver is a charity or the recipient is not authorized to receive the money. Features: Send and receive bitcoins Use Bitcoin Core and Armory as GUI for sending and receiving bitcoins Send and receive on the blockchain Manage multiple bitcoin addresses View your wallet balance, coins and address Scan QR codes to convert bitcoins to cash Sync your wallet with the blockchain Export all addresses and private keys View incoming/outgoing transactions, bills View incoming/outgoing transactions, bills Free and open source software Supported operating systems: Windows Mac Linux Minimum requirements: Bitcoin Core is compatible with Bitcoin version 1.0 and above, and as of version 0.9.6 and above, it is compatible with versions 0.11.0 or higher of Bitcoin XT. Minimum hardware requirements: It depends on the Bitcoin Core version you are running, but most computers should be able to operate the software. Bitcoin Core is designed to be run on desktops, laptops, servers, and smartphones. Bitcoin Core is designed to be a fast, light-weight implementation of the bitcoin protocol, with robust P2P networking support. Bitcoin Core can be used to make payments, store coins offline, and synchronize with other nodes over the bitcoin network. Bitcoin Core is free software, distributed under the terms of the GNU General Public License version 2 or later. Bitcoin Core is developed and maintained by the community. For help and discussion, visit the #bitcoin-core IRC channel on irc.oftc.net. System requirements: Bitcoin Core version 0.15 or higher is compatible with OS X 10.5 or later. Bitcoin Core version 0.12 or higher is compatible with OS X 10.4 or later. Bitcoin Core version 0.9.6 or higher is compatible

What's New in the Electrum?
