[Click image for larger view] AutoCAD is only one of many 3D (or 3D-CAD) computer-aided design (CAD) applications available. Autodesk claims that AutoCAD is "the first widely used 3D-CAD application to embrace and encourage the use of user-friendly design tools and productivity enhancements." [Click image for larger view] The "3D" is a misnomer; AutoCAD's 3D rendering is based on a 2D screen. AutoCAD utilizes flat wire-frame graphics, and the user can view the results of geometric operations (rotate, mirror, move, etc.) from the 2D point of view. There are four major features of AutoCAD that distinguish it from other CAD programs. 1. Easy to learn - AutoCAD is designed to be easy to learn, even for people without previous experience in CAD, because the user interface (UI) is based on human-computer interaction (HCI). AutoCAD is a graphical user interface (GUI) so it requires little or no programming for the user. AutoCAD offers a set of predefined tools, which are called utilities, that can be arranged to make any desired task easy to perform. The pre-defined utilities are called palettes, and each palette is configured with various commands and tools that are related to that task. The AutoCAD 2015 version is similar to AutoCAD LT (1.0) but offers more customization options for the user. The major difference between AutoCAD LT and AutoCAD 2015 is in the UI. [Click image for larger view] For AutoCAD users, the main menu screens (Catalog, View, etc.) are similar to other CAD applications. The differences between the menus in AutoCAD LT and AutoCAD 2015 are mainly in the utilities/palettes and in the icons used for common tasks. [Click image for larger view] 2. Easy to share - The GUI in AutoCAD is designed to be used in the 2D point of view. The 2D point of view is not limited to just drawing. The AutoCAD 2015 version offers a number of new and improved features that are designed to help with sharing documents. Among the new and improved features in AutoCAD 2015 are The ability to perform edit operations (undo and redo) on individual

I have this code that populates the form and then uses Regex to validate the form: var text = textBox1.Text; var text1 = textBox2.Text; var text2 = textBox3.Text; var text3 = textBox4.Text; var text4 = textBox5.Text; var text5 = textBox6.Text; var regex = new Regex(@"^\s*[a-zA-Z0-9]{1,}.*$"); if (regex.IsMatch(text) || regex.IsMatch(text1) || regex.IsMatch(text2) || regex.IsMatch(text3) || regex.IsMatch(text4) || regex.IsMatch(text5)) { MessageBox.Show("Please enter the correct text"); } else { textBox1.Text = text; textBox2.Text = text1; textBox3.Text = text2; textBox4.Text = text3; textBox5.Text = text4; textBox6.Text = text5; } The problem with this is that I have to copy this code 6 times (textBox1 to textBox6) to check if each field is empty. It'd be great if I could do something like: var text = textBox1.Text; var text1 = a1d647c40b

Open the Autocad Options and change your Autocad language (to Spanish), Autocad version (Autocad 2009) and Autocad installation folder (Desktop) Open Autocad and create an empty drawing. Open the Autocad Options and change the language to English (Canada) Go to the menu Bar, Draw Tools and set the Active View mode to paper. Create a new drawing using the new drawing template. Repeat steps 2-5 but this time, change the Autocad language (to English), Autocad version (Autocad 2008) and Autocad installation folder (Program Files) Open the autocad template and edit the drawing using your favorite text editor. What's New In?

AutoCAD now supports live markup import. Drawing objects, such as text, 3D models and special symbology, appear directly in your drawing, ready to be edited. You can use this import feature to make changes to your drawings without moving out of AutoCAD or opening an external editor. (video: 3:00 min.) Use AutoCAD to generate a file-listing tool that displays all information for one or more drawings. The file-listing tool uses COM automation to access information from external applications. (video: 5:25 min.) Use markup assist to merge and reroute data from external applications into your drawings. With the help of powerful new features in Markup Assist, you can import and exchange file-listing data, annotations, files and so on into your drawing. This lets you manage files and workspaces by the business or project, so you don't need to spend time switching to a different program to do specific tasks. (video: 2:40 min.) Edit Part Features: Edit Part allows you to edit components of multiuser drawings without opening or saving files. This capability lets you edit components that were created by another user, or components that you had modified before saving. (video: 3:40 min.) Improvements in drawing, editing and drawing part interoperability help you work with drawings by converting drawings that you have created into multiuser drawings and creating multiuser drawings from workfiles that you have previously saved. (video: 2:10 min.) Enhancements in editing components help you edit drawing components that were created by another user. (video: 1:15 min.) Drawing Information from other applications: Automatically import and display files from other applications in your drawing. You can connect to files in other programs, such as Word, Excel and PowerPoint, to display information from those files directly in your drawing. (video: 3:35 min.) You can now access information from other programs by using the command-line scripting interface. For example, you can import a word file and automatically detect the corresponding units in your drawing. (video: 2:10 min.) Simplify the process of managing and displaying drawings from applications that generate drawings. When you are working in multiple drawing applications, such as Word, Excel, PowerPoint and AutoCAD, you can now easily share and import drawings to each program using the same
