## PS3Eye Camera Setup V3.0.0.0901.exe

I have a LabView installation running with the IMAQ package installed. ... be widely used with DirectShow Compatible Software 3.0.0.0901 ... I'm trying to use the IMAQ module to access my DLL in LabView. I am getting an error: "Could not create IMAQ module (error code: 0x80140000)". I've tried using the Create Module function to get the module and pass parameters, but I always get the error "Error: Failed to create IMAQ module..." even though I'm using DLLs IIRC. Can someone explain to me how can I use the IMAQ module in LabView? Or maybe I'm doing something wrong.
